

Vacuum Oven

Designed for vacuum heat treatment such as defoaming, degassing, curing and drying

Under a vacuum environment, the boiling point and drying temperature are lowered, which is useful to dry samples that are sensitive to heat.

The vacuum oven VAC achieves both energy conservation and high-temperature performance by improving the air-tightness and heat insulation of the chamber.

The controller is intuitive and comes with advanced programmable functions to control temperature and pressure.

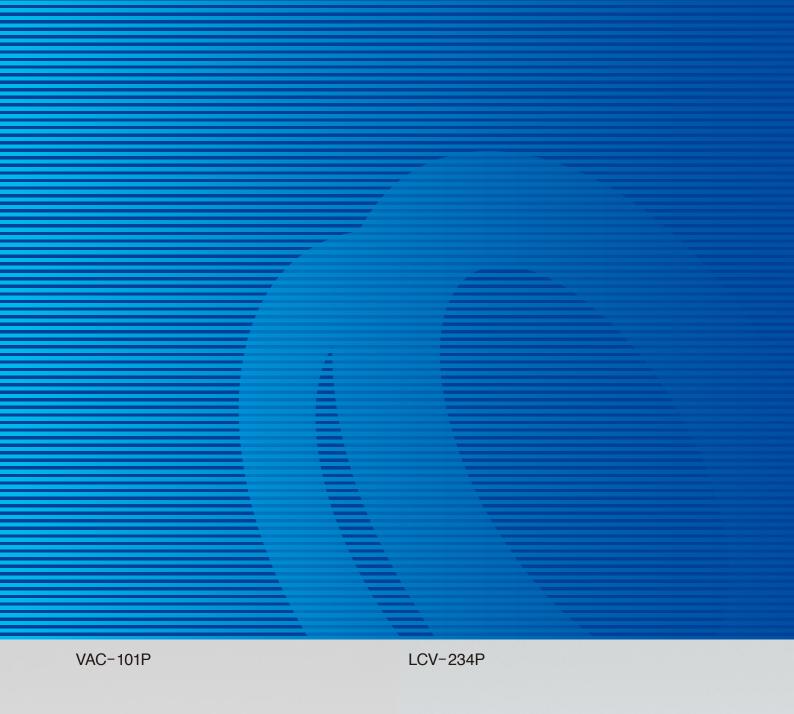

Furthermore, it conforms to the CE marking and has a substantial safety design suitable for the global age.

VAC-301P

VAC-201P

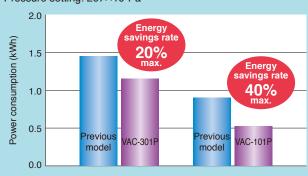

A broad array of energy-saving mechanisms and support for wider range of vacuum drying treatments

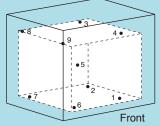

The viewing window and emergency stop pushbutton are optional.

Power consumption comparison of vacuum pumps under automated operation mode

Example of application: Aircraft component testing Temperature setting: +200°C Pressure setting: 267×10°Pa

Test area temperature uniformity measurement example

Model: VAC-301P
Temperature setting: +200°C
Pressure setting: 1×10²Pa
Ambient temperature: +23°C
Measurement point: 9

Number of measurement: 10

Point	1	2	3	4	5	6	7	8	9	Uniformity
Temp. (°C)	+193.6	+194.2	+196.9	+197.2	+197.6	+190.4	+194.7	+198.4	+196.0	±1.9

Vacuum drying treatment for a wider array of uses

A vacuum (low-pressure) environment has a lower boiling point, allowing drying to be done at a lower temperature. The vacuum oven enables drying treatment at a lower temperature for specimens that cannot be treated by conventional high-temperature drying. Furthermore, the vacuum and N2 gas exchange modes enable drying of oxidation-averse specimens, as well as drying and heat treatment within a clean environment by eliminating impurities in the chamber through repeated heat treatments or gas exchanges.

A versatile equipment

The ovens are ideal for many applications, especially in electronic component production: defoaming when mixing silicone rubber or resins in LED manufacturing, deaerating during resin forming, hardening when injecting epoxy for hybrid ICs, or drying electronic components after washing.

Uncompromising energy-saving mechanisms

Power consumption was reduced through improved air-tightness and insulation achieved by using superior insulation materials and by changing both the door locking mechanism and the enclosure structure.

Air-tightness and insulation capacity have a significant impact not only on temperature control but also on pressure control. Through improvement of these properties, the VAC-101 achieves up to 40% energy savings.

In addition, the enhanced air-tightness helps prevent a temperature rise in the surrounding area of the chamber.

Vacuum control modes suitable for a wide range of applications

Pressure operation modes to select for flexible programming.

There are five operation modes available to select pressure control. A variety of programs can be designed by combining constant temperature operation and program operations. You can save up to 40 test programs each containing maximum of 99 steps.

Gas exchange operation mode prevents oxidation and eliminates impurities inside the chamber

Oxygen inside the chamber can be removed by replacing the air with N2 gas, preventing oxidation during the drying operation. In addition, a high-precision environment can be created by repeatedly performing the exchanges.

This mode also removes organic substances in addition to preventing oxidation, reducing the impact on specimens.

Expert Mode demonstrates its capabilities in repeated high-volume processing (option)

The depressurization schedule used is stored and can be called up for subsequent operations to ensure accurate processing.

Expert Mode eliminates the fussing with valve controls for each process which makes it ideally suited for repeated high-volume processing of identical specimens.

Pressure operation selection

Pressure operation modes

mode	Details	Program and Typical pattern
Automated operation	Enables constant operation at a fixed pressure and ramp operation with programmed pressure increase and decrease times. ON/OFF of vacuum pump and atmosphere inlet valve are controlled automatically.	Ramp operation 1013 250 SV 0 Constant operation 1013 250 SV 0 Constant operation
Continuous operation	Enables continuous operation in a vacuum. The vacuum pump runs continuously.	(10 ² Pa) 1013 250
Open to atmosphere	Introduces atmospheric air into the chamber. Stops the vacuum pump and opens the atmosphere-inlet valve.	(10 ² Pa) 1013 250 Valve opening
Gas exchange	Repeatedly performs continuous operation and N ₂ gas introduction. Pressure value and number of replacements can be set for the exchangeoperation.	(10 ² Pa) 1013 250 N ₂ introduction
Ventilation operation	Outside air can be introduced using the automated operation. The vacuum pump runs continuously.	(10 ² Pa) 1013 250 SV
Expert (Option)	Pressure setting can be adjusted using a controller with learning function. Temperature and pressure settings can be saved and replicated in programmed operations.	(10 ² Pa) 1013 250 step 1 2 3 4 5 6

Viewing window (option)

Test area (The shelves and hermetic terminals are optional.)

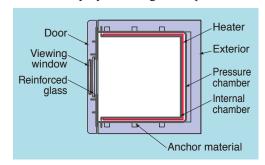

Viewing window for specimen observation (option)

The viewing window is slightly curved to eliminate exterior reflections.

Double-wall construction for superior temperature uniformity

The vacuum chamber features doublewall construction. A heater on the exterior of the test area minimizes heat loss and improves temperature uniformity.

This design allows even more uniform heat treatment and improves machine efficiency by reducing heat-up time.

International safety standard compliance

Complies with safety of Machinery (ISO 12100), Low Voltage (IEC 60204-1), EMC (EN 61000-6-2, 55011). It is also RoHS.

Custom-made Equipment

This equipment can perform low-pressure (altitude) tests in the UN Test Standards Manual on the

assumption of air transportation.

Sytem	Mechanical type single-stage refrigeration system		
Temperature range	-20°C to +80°C		
Temp. constancy	±0.5°C		
Temp. heat up time	+20°C to +80°C within 60 min.		
Temp. pull down time	+20°C to -20°C within 90 min.		
Temp. uniformity	+5°C (at +20°C, 11.6kPa)		
Pressure control range	93.3kPa to 10.1kPa		
Achieved pressure	Less than 10kPa		
Inside dimensions (mm)	W560 × H560 × D509	W800 × H800 × D709	
Capacity	160 L	453 L	

Easy-to-use, easy-to-read touch panel

Tabbed user interface

The controller's new design includes tabs at the bottom of the screen to easily access any section and optimized layout. It also comes with an updated CPU with more power for improved process speed and calculation.

Register test patterns

Up to 40 patterns for program operation and 3 patterns for constant operation can be registered.

Program editing from a PC (option)

A USB port is available as an option, which allows you to transfer the test pattern that you programmed on a PC using the dedicated software via USB drive.

Multi-lingual display

A simple operation changes display text to Japanese and Chinese (simplified). Select the language that suits your needs.

OPTIONS (VAC)

Expert Mode

The jog dial can be used to precisely control, record, and reproduce depressurization.

Atmospheric pressure recovery time reduction

An atmospheric release valve with larger piping port is added. The valve opens and closes manually.

Atmospheric pressure recovery time: within 2 min.

*The optional air filter cannot be fitted.

Pirani vacuum gauge

Pressure is displayed digitally, while this gauge is used to measure pressure accurately below 2700 Pa.

Measurement range: 0.4 to 2700 Pa Measurement precision:

within \pm 3% of full-scale (converted to linear scale)

Hermetic terminals for voltage application

Used when applying voltage to specimens.

Specifications: Hermetic terminal (four-core)

Max. current: 6 A

Max. voltage: 200V AC, 250V DC Mounted location: Oven rear side

* Maximum 4 (total quantity of both thermocouple and impressed voltage combined).

Hermetic terminals for thermocouples

Used for connection to thermocouples from specimens or chamber interior.

Specifications: Hermetic terminal (eight-core, four pairs)

Mounted location: Oven rear side

* Maximum 4 (total quantity of both thermocouple and impressed voltage combined).

for thermocouples

Recorder output terminal

This terminal outputs the test area temperature and pressure via 1 to 5V DC linear output.

Temperature: +20°C to +220°C Pressure: 0 to 106.7 kPa

OPTIONS (VAC)

Paperless recorder

Records temperature and pressure inside the chamber. Additional inputs may also be recorded.

Display: 5.7inch color touch panel Temperature range: +20 to +220°C Pressure range: 0 to 106.7kPa

Number of inputs:

Temperature 1 Presure 1

(4 more channels can be turned ON)

Scan interval: 5 sec Internal memory: 8MB External memory media:

CF memory card (Includes a 256MB CF card)

External memory function: USB port

Temperature and pressure recorder

Records the oven internal temperature and pressure.

Temperature range: +20 to +220℃

Pressure range: 0 to 106.7 kPa

Input: Temperature (× 1),

Pressure (× 1)

Recording method: Dot

Absolute pressure sensor

The standard gauge pressure is replaced by absolute pressure sensor as pressure indication method.

External alarm terminal

If the safety device of the chamber is activated, external alarm terminal will notify it to a remote point.

Power capacity: 250V AC, 3A Operation: Connection output when

error occurs (closed)

Mounted location:

Oven rear side (above inlet)

Time up output

A contact signal is sent when a step in the program changes, or when the program ends.

External device alarm input terminal

When the chamber is interlocked with an external device, this option is used to stop chamber operation when an error is issued from the external device.

Status indicator light

Illuminates to indicate errors when the safety device activates.

Emergency stop pushbutton

Stops the chamber immediately.

Operation status indicator

The LED light above the instrumentation panel indicates the chamber status

Door with viewing window

Used for observation of the specimens inside the chamber.

Size: W324×H336 mm

Power meter

Displays the integral power consumption for the chamber.

Floor reinforcement

To enhance the floor load capacity inside the chamber. Machinery compartment is also reinforced.

OPTIONS (VAC)

Air filter

Filtering air introduced into the chamber.

Port size: 0.2 µm

Pressure resistance: 4.2 kg/cm² Connector port: NPT 1/8, male screw

Location: Air inlet

Vacuum pump oil

Model: SMR-100 (500mL \times 2)

Cold trap

Cools and removes moisture and organic solvents contained in the outside air before being drawn into the vacuum pump. (Separate from oven) Outside dimensions:

 $W300 \times H835 \times D350 \text{ mm}$

Vacuum pump exhaust port

Exhaust gas from vacuum pump outside.

External connection port:

NW25 (ISO standard)

Connection:

Quick coupling

Center ring with O-ring (not provided)

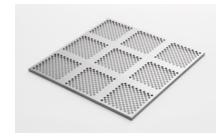

Location: Rear side

Removal of pump

The standard fitted vacuum pump is removed. Terminal block for vacuum pump power supply and pump intake port connection hose are prepared inside the chamber.

Stainless steel shelf

^{*} This option does not comply with RoHS Directive.

^{*} the chamber main unit weight, electric current, and power supply voltage will be changed.

Program Copy and Computer Editing Copy LCV Edit LCV

Direct heating system for fast vacuum-dry

In addition to the gas exchange function, it can treat specimens in oxygen-free environment using nitrogen or other gases, and supports baking, degassing, hardening, deaeration, and other applications.

Color LCD touch panel

N-Instrumentation with 4.3-inch touch panel display comes with originally designed human-machine-interface that allows easy navigation throughout its functions. The touch panel is pressure sensitive resistive type which allows you to operate even with gloves on.

Remote monitoring and control (Ethernet connection)

Taking advantage of an Ethernet connection makes it possible to check the operation status from a remote location.

Web browser access allows users to edit program patterns registered in the chamber and to monitor temperatures.

*Vacuum control requires operation of a valve on the chamber.

Copy test profiles

Share the test profiles among chambers via USB memory* instead of PC.

* USB memory not included.

E-mail notifications

Details on alarms that have been triggered will be sent to pre-registered e-mail addresses. It is also possible to transmit e-mails when testing has finished.

* An Intranet environment is required to transmit e-mails.

OPTIONS (LCV)

Hermetic terminals for voltage application

Used when applying voltage to specimens.

Specifications: Hermetic terminal (four-core)

Max. current: 6 A

Max. voltage: 200V AC, 250V DC Mounted location: Oven rear side

* Maximum 5 (total quantity of both thermocouple and impressed voltage combined).

Hermetic terminals for thermocouples

Used for connection to thermocouples from specimens or chamber interior.

Specifications: Hermetic terminal (eight-core, four pairs)

Mounted location: Oven rear side

* Maximum 5 (total quantity of both thermocouple and impressed voltage combined).

Specimen power supply control terminal

Terminals that are used to supply power to the specimen. When chamber operation stops due to a problem, power to the specimen is interrupted.

* This option is always used when the power is supplied to specimen placed inside the chamber.

Reverse flow prevention valve

The valve prevents lubricating oil inside vacuum pump from reverse flow when chamber is under vacuum state.

* LCV-234P, 244P models only.

Shelf, Shelf bracket

Equivalent to standard accessory.

Chamber stand

The stand is equipped with casters enabling the chamber to move easily.

* Standard equippment in LCV-234P, 244P models.

Interface

Communication ports to connect the chamber to a PC.

Safety precautions

- •Do not use specimens which are explosive or inflammable, or which contain such substances. To do so could be hazardous, as this may lead to fire or explosion.
- ●Do not place corrosive substances in the chamber. If corrosive substances are generated by the specimen, the life of the chamber may be significantly shortened specifically because of the corrosion of stainless steel and copper and because of the deterioration of resin and silicon.
- ●Do not place life forms.
- •Be sure to read the user's manual before operation.
- Some photographs listed in this catalog contain Japanese display.
