No. 8870- 00 DATALOGGER MODEL SK-L754 (1-channel each for Temperature and humidity measurement)

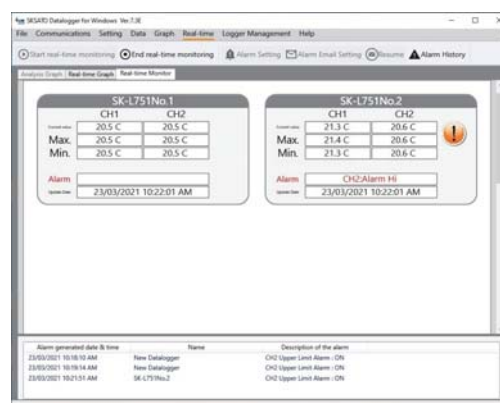

FEATURES

- The memory capacity is 16000 data items per channel. With logging interval of 90 minutes, the data of approx. 2 years and 9 months can be stored.
- The method of storing data is selectable among four logging options; "Once", "Repeatedly", "Ends at..." and "By pages".
- Logged data can be copied to microSD card.
- Data analysis software and real-time transmission software are included as standard accessories on CD-ROM.
- The power supply can use both of batteries and an AC adapter (option).
- The date and time to start logging automatically can be specified by setting the preset start.
- The measurement data can be transmitted in real-time to a personal computer.
- The upper and lower thresholds for warning can be set. When the temperature or humidity threshold is triggered, the alarm mark (Hi/Low) and alarm lamp will light.
- The probes are interchangeably used with the main units.
- The storage memory can be verified with the memory indicator.
- The logging interval can be selected from 14 options: 1 sec, 2 sec, 5 sec, 10 sec, 15 sec, 30 sec, 1 min, 2 min, 5 min, 10 min, 15 min, 30 min, 60 min and 90 min.
- Even if batteries run out, the data will not be lost. Measured data is saved in the internal memory.
- The datalogger ID (6 digits) can be set. It helps you identify multiple dataloggers.
- By using the data analysis software attached, the acquired data can be evaluated easily and quickly, and also evaluated by using commercial spreadsheet software supporting CSV extension such as Microsoft Excel.

Use an external fan for faster response and more accurate measurement. It is in combination with this fan that the maximum capability of measurement for temperature and humidity can be achieved.

The fan inhales fresh air into the instrument and makes the response of sensor faster, resulting in the detection of accurate data. It is effective, particularly in warehouses which are excluded from the open air, laboratories where ventilation is poor or air tight small space.
