SCT-5030LX AUTOMATIC SHRINKING MACHINE

Summarize:

This machine is made of PE, PVC, POF and other films as material, wrapped in the product or packaging, and then heated to shrink the packaging material and wrap up the automatic heat shrinkable equipment of the product or package.

The contractile product can fully display the appearance of the goods, provide the display of the goods, increase the beauty and the sense of value, and the articles after packing can be sealed, moisture proof

and anti pollution, and protect the goods from the external shocks, and have a certain buffer, especially when the containers are used in the packaging of glass containers to prevent the container from breaking. Fly away. In addition, it can reduce the possibility of being dismantled and stolen. When the film is contracted, a certain tension can be produced, which can bind a set of goods that need to be wrapped and play the tie of the rope. It is especially suitable for the collection and packaging of many articles. The equipment is widely used in light industry, food and beverage, candy, cultural supplies, arts and crafts, printing products, pharmaceutical products, chemical industry, hardware and electrical components and other industries.

technical parameter:

Model	SCT-5030LX
Power supply	3φ/380V 50/60Hz
power	16KW
Maximum packing size	L500×W400×H250mm
Mechanical size	L1800*W1000*H1350mm
Work efficiency	2500-3500/h
Net weight	650kg
